

ÉDITO:

Dear Pupil's' Parents,

This week we worked on our afterschool activities' offer for 2nd semester. Thanks for your reactions during subscriptions, for your availability and your understanding about building homogeneous groups among a limited number of activities.

*Afterschool activities are an important part of the schooldays. At LIFT we want it to be a moment with added pedagogical value, in order to offer the most complete and personalized trilingual exposure. This way **we can show all our pupils new horizons, interests and experiences, enrich their creativity and their relationship to the world.***

This is also an opportunity, and it matters to us, to offer a wide range of hosting time, so that you, pupils' parents, can balance professional and personal lives with ease. We wish, as much as possible, to offer within our walls all the learning experiences our pupils need; in order to get a clear psychological separation between the moments of focus and school learning and moments of rest, games, friendship and family time at home. Our homework policy strengthens this goal.

In line with our founding principle of affordability, the activities costs reflect the rates of the educational material and the workshop host.

This semester's main points are:

Sport, in addition to the primary school's French curriculum hours (among which are swimming courses in the 2nd semester). Brazilian Jiu-Jitsu, soccer, sport dance, body language, circus arts: our pupils have the chance to grow a healthy relationship to body and effort, as well as their inherent values.

Give creativity as much space as possible: it is our teachers' everyday demand. By designing the future LIFT goodies collection, playing ukulele, creating a stop-motion animated movie, putting on play or creating their own boardgames, LIFT's pupils can express their identities, their cultures, their tastes, and experiment.

Well-being at school, every LIFT's soul's guideline, will come in the form of meditation, tales reading, nature discovery, calligraphy, and desserts of course!

Lastly, building critical thinking, experimental and scientific approach and inquiry mindset, an important French school's feature that we highlight at LIFT, thanks to the scientific experiments club, the STEAM club and a new activity of introduction to code.

I sincerely hope these new educational offers will enable each and everyone build new beautiful school memories.

Cordially,
Thomas Chaumont
